

**Lubricant comparison table**

Lubricant comparison table for all Wirtgen machines under consideration of normal operating conditions at ambient temperatures of -15°C to +40°C.

The lubricant comparison table compares a lubricant of a trade name with the lubricants of other trade manufacturers.

Due to the enormous quantity of lubricant manufacturers, it is not possible to include them all. For this reason, the Engineering Department decided to include the products of important suppliers that are presently available on the German market. A modification of this table could, if necessary, be carried out at a later date.

The lubricant industry is a fast-moving industry and new products are frequently penetrating the market, while others are continuously disappearing. The designations of existing products are also being frequently altered.

A complete schedule of all available lubricants, including all data, approvals (e.g. from engine and gearbox manufactures) and specific quality characteristics, is not possible due to volume reasons. The stated specifications take into consideration DIN, API and MIL standards.

**These companies have been newly added to the lubricant comparison table:**

LIQUI MOLY, OMV

**These companies have been removed:**

CASTROL, DEA, ELF, MOBIL, TRIBOL

**Amalgamation of companies:**

CHEVRON and TEXACO = CHEVRON TEXACO

MOBIL and ESSO/EXXON = ESSO/EXXON-MOBIL

**These companies have been changed:**

AGIP = ENI S.p.A.

TOTALFINA = TOTAL

**Revision of specifications:**

Engine oil API class CG-4 is changed to class CI-4 (for application in modern, low-emission diesel engines according to EPA Tier III and EU-97/68/EC Stage IIIa and simultaneous application of low-sulphur diesel fuel (0.05 - 0.5%), it is necessary to use an engine oil of API CI-4 specification)

(**API** = **A**merican **P**etroleum **I**nstitute) - (**ACEA** = **A**ssociation des **C**onstructeurs **E**uropean d'**A**utomobiles)

**Coolant recommendations have been added to the lubricant comparison table.**

The lubricant comparison table is designed to offer an initial insight when servicing Wirtgen machines. It does not overrule the recommendations of a lubricant specialist or the engine and gearbox manufacturers.

In line with increased consciousness towards environmental protection, it is imperative that old oil is correctly disposed of when carrying out service work or after an oil change.

The lubricants for special operational conditions are not included or compared in the lubricant comparison table.

 **CAUTION**

*Gear oil based on fully-synthetic Polyglycole cannot be mixed with mineral oils.*

*Biological hydraulic oils based on synthetic ester cannot be mixed with mineral oils.*

**Engine oil selection table**

The oil viscosity grades according to SAE are selected by using the adjacent scale. The ambient temperatures are decisive when selecting the correct viscosity grade. Brief drops in temperature below the chosen limits will impair the cold starting performance but not cause engine damage. Temperatures above the chosen limits should not prevail for longer periods because of the risk of excessive wear. Multigrade oils are recommended for all-year applications.

**Diesel fuel selection table**

During low ambient temperatures, paraffin can be dispersed and cause clogging in the engine's fuel system. Use diesel fuel (safe to -15°C) if the ambient temperature falls below 0°C. Diesel with an additive is also available for temperatures down to approx. -20°C. If the temperature falls below -15°C or -20°C, petroleum can be added according to the adjacent table. If summer diesel fuel must be used at temperatures below 0°C, up to 50% petroleum can be added according to the adjacent table.

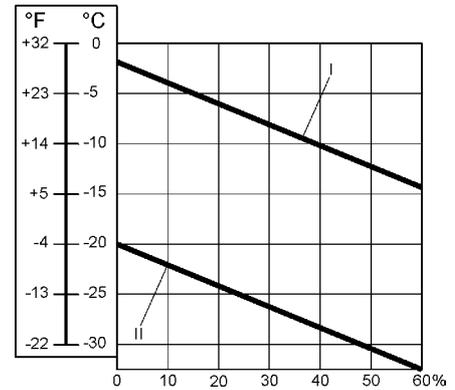

**I = summer diesel fuel; II = winter diesel fuel**

**Requirement of diesel fuel**

- Combustion point min. 55°C
- Water content max. 200 mg/kg
- Sulphur content max. 350 mg/kg
- Lubrication capability „wear scar diameter“ max 400 µm
- Cetane code for mild climates min. 49 - 51
- Cetane code for arctic climates min. 47 - 49
- Use diesel fuel according to European standard EN 590.

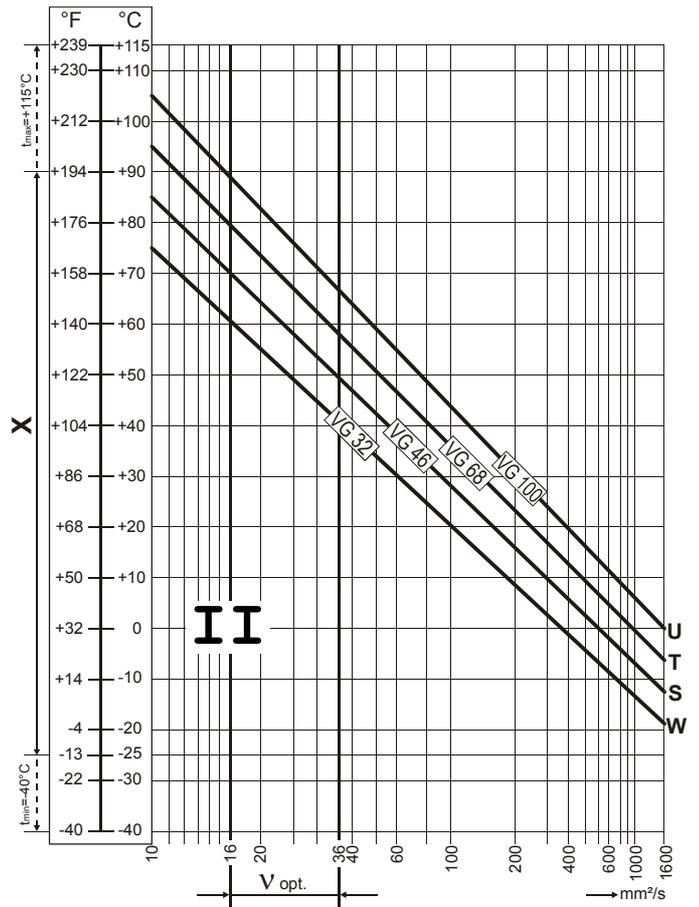

**CAUTION**

- The service intervals must be shortened when using diesel fuel containing a high rate of sulphur (more than 0.3 weight%).
- The original instructions of the engine manufacturer (operating, service and maintenance instructions, etc.) are to be strictly adhered to.

**Hydraulic oil selection table**

- W** = winter conditions in central Europe
- S** = summer conditions in central Europe or indoors
- T** = tropical conditions or highly heated rooms
- U** = high temperatures (e.g. caused by combustion engines)
- X** = pressure fluid temperature range
- v opt.** = optimum operational viscosity range
- 1000** = max. permissible viscosity (short periods)
- II** = 10mm<sup>2</sup>/s (t<sub>max</sub>= +90°C) . . . 1000mm<sup>2</sup>/s (t<sub>min</sub>= -25°C)

**Selecting coolant anti-freeze**

Coolant stipulation for whole year

50% addition of approved anti-freeze equals -37 °C frost protection.

Increased demands are placed on the coolant for diesel engines.

Coolant concentrates are approved according to Daimler Chrysler stipulations 325.2 and according to ASTM D4985.

Supplier	Coolant concentrate acc. to ASTM D4985 (WIRTGEN approved)
CATERPILLAR / ZEPPELIN	DEAC - Diesel Engine Antifreeze/Coolant
ARTECO (Joint venture ELF/TEXACO)	Havoline AFC-Antifreeze/Coolant, Havoline XLC
BP Schmierstoff GmbH	ProCool
BASF AG	Glystantin G48, Glystantin G30
SHELL	Glycoshell
ARAL Lubricants GmbH	Antifreeze Silikatfrei
HÄRTOL Chemie GmbH	Frostox SF-D12
EXXON MOBIL	Mobil Antifreeze LL2000
TOTAL	GLACELF Plus / GLACELF Auto Supra

Different coolants are not always compatible. Different additive technologies can influence or impair each other so that the cooling function could be drastically reduced. Damages caused by incompatible mixing or incorrect use of coolants are not covered by warranty agreements. The water for the production of coolants should be distilled or fully desalinated.

Special industrial gear oils	Gear oil CLP 320 DIN 51517 part 3 ISO-VG 320	NRS	Load Way EP 320	Meropa 320	Carter EP 320
Special hydraulic oils	Hydraulic oil type HVLP acc. to DIN 51524 part 3 with EP-additives ISO-VG 32	HYD 0520	Hydra Way HVXA 32	Rando HDZ 32	Equivis ZS 32
Standard hydraulic oils	Hydraulic oil type HVLP acc. to DIN 51524 part 3 with EP-additives ISO-VG 46	HYD 0530	Hydra Way HVXA 46	Rando HDZ 46	Equivis ZS 46
Standard hydraulic oils	Hydraulic oil type HVLP acc. to DIN 51524 part 3 with EP-additives ISO-VG 68	HYD 1030	Hydra Way HVXA 68	Rando HDZ 68	Equivis ZS 68
Special hydraulic oils	Hydraulic oil type HVLP acc. to DIN 51524 part 3 with EP-additives ISO-VG 100	HYD 1040	Hydra Way HVXA 100	Rando HDZ 100	Equivis ZS 100
Special biolog. hydraulic oils	Biolog. hydraulic oil type HVLP HEES (VDMA 24568) with EP-additives ISO-VG 46	BIO-E- HYD 0530	Hydra Way Bio SE 46	Synstar Hydraulic HT 46	Biohydran TMP 46
Special biolog. hydraulic oils	Biolog. hydraulic oil type HVLP HEES (VDMA 24568) with EP-additives ISO-VG 68	BIO-E- HYD 1030	Hydra Way Bio SE 68	Synstar Hydraulic HT 68	Biohydran TMP 68
Standard grease	NLGI class 2 KPF 2 K - DIN 51825 with EP-additives	MPG-A	Uni Way LIX 625	Molytex EP 2	Multis MS 2
Special grease	NLGI class 3 KP 3 P-20 DIN 51825	MPG-C	----	----	Ceran WR 2
Flow grease	Flow grease based on mineral oil with EP-additives (lithium based) KP/GP 00-30 DIN 51502		Grease Way LIX 400	----	Multis EP 00
Heat transmission oils	Heat transmission oil for forced-circuit units up to 320°C DIN 51522-Q ISO-VG 22 (32)	NRS	Term Way	Texatherm HT 22	Seriola 1510

\*\* HVBI abbreviations by the Hauptverband der Deutschen Bauindustrie e.V. (Principal Association of German Construction Industry) for "standard lubricants" for construction machinery and vehicles

\*\*\* not mixable with mineral oil
